Lab Number: 1
Name: Shivan Kathir
Student Number: 300366387

Name: Darrell Nyakaana
Student Number: 300306066

Description

The website I built is a small informational website for a fictional chess club at the University of Ottawa. It contains a home page, an about page for information about the club, a schedule page with information on the clubs schedule, and a registration page with a form for students to sign up.

File Structure

There are four html files - `index.html`, `about.html`, `schedule.html`, `registration.html`, one for each page of the website, and a folder images, which contains file images.jpg, which is the one image used.

Web Communication Process

Role of Browser as Client: The browser's role in the web communication process is the client, this means it's responsible for requesting information from the server, interpreting the response, and rendering the final page for the user to interact with.

Role of a web server: The role of a web server is to process http requests from the client, and send the requested data back to the browser.

The purpose of a URL: The purpose of a url is to act as an address for a specific resource on the internet (webpage,image,file). It tells the browser where to find resource and how to access them.

The basic role of DNS: The Domain Name System (DNS) is to translate human readable domain names into its corresponding ip address, which allows computers to communicate.

The idea of an http request and http response: HTTP requests and responses are how the browser and server communicate. The browser sends http requests with a method (eg: GET), resource path and other headers, and the server processes the request and replies with a http response that contains a status code indicating success or failures, and the content of the resource.

Difference between local files in development and files served by a web server: Local files in development are read directly from your computer's own storage, and are opened in

the browser with a local file path. Files served by a webserver differ in that these files are accessed over a network via an URL.

HTML5 Semantic Elements Used

`<header>`: Used on every page as a semantic container of the introductory content.

`<nav>`: Used on every page as a semantic container for the main navigation links, which are the different pages for this website.

`<main>`: Semantic container that wraps the core content of the page.

`<footer>` Semantic container that appears at the bottom of the page.

`<figure>`: Appears on the about page, is used to mark self contained content, which is the image and `<figcaption>` element in this case.

`<table>`, `<thead>`, `<tbody>`, `<caption>`, `<th>`: These semantic elements are used on the schedule page, to mark the table data properly

Form Design and Validation Attributes Used

The form is organised into two field sets, the first groups inputs related to player information, and the second voluntary diversity and equity information. Each input has an associated label with the for/id pairing. Placeholders are used in some inputs, to give users a general idea of what needs to be entered.

Validation Attributes Used:

required: used for name, email, phone number, and year of study inputs.

minlength: used on name input to ensure names contain at least 2 characters

maxlength: used on name input to ensure names don't contain more than 100 characters, and text area to ensure people don't enter more than 500 characters for it.

type="email": used on email field, to validate that email entered is a proper email

type="tel" with **pattern="\+[0-9]{7,20}"**; used on phone input, to validate that a properly formatted phone number is entered

About uOttawa Chess Club

The uOttawa Chess Club is a community for chess enthusiasts at the University of Ottawa.
We organize regular meetings, tournaments, and social events for members of all skill levels.

Still not convinced?

Here are some of the benefits of joining:

- Free snacks and drinks for all members at meetings
- Multiple chess boards for all members to use
- Free tutoring sessions for beginners

New to chess? Check out [Chess.com](#) and start playing today!

Problems faced:

One of the initial problems I faced was figuring what to actually make the website about. I was able to solve this by instead of coming up with my idea for a club, using an already established one that I knew about, that's how I decided to create my website on the uOttawa chess club.

Another problem I faced was properly formatting the table in schedule.html, as tables wasn't something I had worked with a lot in html. I solved this by referencing documentation on html tables such as <https://developer.mozilla.org/en-US/docs/Web/HTML/Reference/Elements/table> to support me.
